

Thanks for your purchase!

I share your passion for the MSX, and it brings me immense joy to inform you that the Wozblaster Reloaded cartridge you now own was meticulously crafted in my personal lab with maximum care. This venture is more than just a transaction for me – it's a dedicated hobby. All proceeds from such sales are reinvested into developing new projects and sustaining the vibrant MSX community.

Your satisfaction is my priority, and I invite you to reach out immediately if any issues arise with the cartridge. I am committed to ensuring that your experience mirrors the standard I expect for myself as a buyer.

The Wozblaster Reloaded is a state-of-the-art sound cartridge designed for MSX (1, 2, 2+, or TurboR), featuring the Yamaha OPL4 chip (YMF-278B-F).

This cartridge elevates your MSX's sound capabilities with default inclusion of a 2MB ROM memory, pre-loaded with samples compatible with the Yamaha YRW801 (MIDI). Additionally, it offers an extra 2MB for custom sample loading. The Wozblaster Reloaded enables you to enjoy games generating OPL4-compatible audio or play incredible Commodore Amiga MODs.

Please note the following important details:

- The cartridge outputs sound to the SOUNDIN pin of your MSX, but for optimal audio quality, utilize the dedicated audio jack on the top of the cartridge. This will provide an impressive, amplified stereo sound experience.
- Activation of the cartridge occurs only when running a program utilizing the OPL4 chip. Consequently, improvements in sound quality are specific to applications that appropriately leverage the chip.

To facilitate your experience, I've curated a collection of software designed for the smooth operation of the cartridge. You can conveniently download the ZIP file from the following link: <http://tinyurl.com/mr25wmus>

Once again, thank you. Your satisfaction is very important, so feel free to contact me with any concerns or questions. I am here to assist you in resolving any issues promptly.
