Thanks for the purchase!

Like you, I love the MSX and this cartridge was built with care in my lab for you. I don't live of selling those things on eBay, it is my hobby, and all the earnings go to build new projects and keep the MSX alive.

Please, if you have any issues with the cartridge let me know right away. I want you to have the experience I want for me as a buyer.

ATTENTION! Please insert the CF card with care and with its back towards the front of the cartridge.

When booting your computer with the cartridge for the first time, it will display the empty flash memory menu. You can press the ESC key or spacebar to access SofaRun in an MSX-DOS session.

In SofaRun you can already run programs that will make use of the default setting with 1MB of expanded memory (RAM), SCC, FMPAC, and the IDE controller.

To list ROMS into the Flash memory menu and run your favorite games faster, use the C2MAN utility available in the \RBSC folder of the card. This program can also be used to set multiple cartridge settings.

I loaded the CF card with part of my personal collection of games so you can make the most of your Carnivore2.

The manual and other resources to better use the cartridge are listed below to help you have the best experience:

- User manual - https://github.com/RBSC/Carnivore2/blob/master/Doc/Carnivore2%20User%20Guide%20(English).pdf
- Cartridge tech description - https://github.com/RBSC/Carnivore2/blob/master/Doc/Carnivore2%20Technical%20Description%20(English).pdf
- RBSC official page - http://rbsc.su/en/

Thanks again for the purchase. And don't forget, if you have any problems, drop me a message and I'll help you to solve.
